

Axway Archiving

Unlimited email archiving in the cloud

There's no disputing the fact that email has become the cornerstone of communication between individuals and among organizations. As a result, email is used for correspondence tracking, litigation support, regulatory compliance, eDiscovery and more. Organizations are now retaining email for at least five years in order to comply with a range of governance and transparency regulations, so the sheer volume of email being stored is immense, making it difficult and expensive to manage. In addition, now more than ever, the data has to be completely secure and readily available.

So what's the solution?

With Axway Archiving, you get *unlimited* email archiving storage in the cloud that is affordable, reliable and secure. It is designed to meet both email compliance-driven archiving (FRCP, SEC, HIPAA, etc.) and storage resource management needs.

Key Features & Benefits	
Improve Mail Server Performance Less email to manage, better server performance	<ul style="list-style-type: none"> Remove older messages from the active messaging system to free up storage space Easily and automatically reduce burden on messaging servers, and on IT
Ensure Compliance Easily comply with privacy, transparency and other regulations	<ul style="list-style-type: none"> Healthcare — HIPAA, Medicare Conditions of Participation Government — FOIA Sunshine laws, Open Records and Open Meeting laws Finance — SEC 17A-4, FINRA, NASD 3010, SEC Investment Act of 1940 Corporations — FRCP SOX
Litigation/eDiscovery Support Avoid potential high costs of eDiscovery or legal sanctions	<ul style="list-style-type: none"> Meet Federal Rules of Civil Procedure (FRCP) mandates requiring that a corporation turn over all email communications – usually within 48 hours – as part of a discovery request Archive, search, retrieve and access all emails quickly Comply with litigation requests in a timely manner

Key Features & Benefits**Ease of Use**

Easy deployment and management at every level with no training required

- Can be up and running within two hours with no hardware or software install required
- Extensive self-service online training videos
- Administrators use self-service Web UIs to configure the system
- Keeps IT staff free for other projects

Real-time Search Capabilities

Find your information quickly and easily

- Immediately access your data, which will never be migrated to offline or near-line storage systems

System Requirements

Supports all major messaging infrastructures including, but not limited to:

IBM Lotus Notes

Novell GroupWise 6.5.1.x and 8.x

Microsoft Exchange 2000, 2003, 2007

IMail Server

Mailtrust

Scalix

Zimbra

Kerio

Browsers

Internet Explorer 7, 8

Firefox 3, 3.5

Opera 935, 10

Chrome 2, Google Chrome 3

No Hidden Charges, No Surprises

Axway Archiving is competitively priced and there are no hidden charges to access, search, retrieve or restore unlimited amounts of data.

Cloud Storage

Using a global cloud infrastructure, Axway Archiving combines ultra-reliable grid utility storage and elastic virtual computing resources with Web 2.0 technology and design methodologies to provide unlimited, instantly searchable storage that is 100% software-free.

Secure Email, In Transit and at Rest

Axway uses Department of Defense standards-based Advanced Encryption Standard (AES) algorithms in CFB-128 mode with 256 bits of key material. For authentication, Axway uses HMAC-SHA1 with 160 bits of key material. DoD standard AES and HMAC-SHA1 are a powerful combination of trusted and reliable encryption and authentication methods that ensure customer data is encrypted and tamper-proof through the entire life cycle. In addition, each customer has their own key to ensure data privacy.

Axway Archiving provides 99.99% data retention. Customer data is hosted in its own data silo and cannot be co-mingled with other customers' information. A GlobalRAID™ Infrastructure offers immediate replication to eight data centers with optional European storage, and a documented 99.99% up-time SLA.

Advanced Search and Discovery

Capabilities include:

- Add comments
- Export results
- Legal hold
- Tag keywords
- Flag for review
